Instead of using the provided "top plugs" simply bend the line and insert the loop into top hole. Capture it by inserting the wind indicator.

Same at this tie called the "halyard retainer". Tie it so tensioning the spirt doesn't force the sail too high.

Keep sail band between inner edges of mast bands especially while racing!

Wind pennant

To tie: Use square knot with keeper (that's an extra half of a square knot)

Mast bands

Sail band
